

AMENDMENTS TO THE ABSTRACT

Please replace the original abstract with the replacement abstract provided on a separate sheet.

ABSTRACT

An ~~There is provided an operation history utilization system including which includes a~~ terminal electric device-(101), a server electric device (user server)-(102), and an application server (103)-that are connected to one another via network. On the terminal electric device-(101), there is implemented a device agent (201)-for storing the device operated by a user, the operation details and the operation time as an operation history set. On the server electric device-(102), there is implemented a user agent-(202) for receiving the operation history transmitted from the device agent (201)-at a predetermined timing and managing the history in a centralized manner. On the application server-(103), there is implemented a service concierge (203)-for providing service, considering the user's taste by inquiring the user agent (202)-about the operation history.
